Hamza Zarour

Software Engineer

Palestine, Nablus | hamzazor14@gmail.com | +970569052005 | LinkedIn: hamza-zarour | GitHub: Hamza-Zarour

PROFESSIONAL SUMMARY

Full-stack developer with hands-on experience building production-grade web applications, including a solo-built multi-tenant SaaS platform in active development. Strong focus on clean architecture, security, and end-to-end ownership. Interested in integrating AI capabilities into real-world software products.

EXPERIENCE

Freelance Frontend Developer — 2025 – 2026

Delivered two client-facing web projects independently. Handled requirements gathering, iterative delivery, and client feedback cycles **–** full software engineering workflow with real stakeholders.

PROJECTS (Selected)

QR Menu SaaS – Multi-Tenant Restaurant Menu Platform | GitHub — 2025 – Present

***Tech Stack**: Laravel 12, React 19, TypeScript, Tailwind CSS v4, MySQL, Sanctum, Framer Motion*

- Architected a production-ready multi-tenant SaaS platform entirely solo, serving multiple restaurants from a single codebase with strict per-tenant data isolation.
- Built a versioned REST API (/v1) with token-based auth, rate limiting, and a 3-tier role system (platform owner / restaurant owner / staff).
- Delivered two full admin dashboards: restaurant owner panel (bilingual CMS, image pipeline, drag-and-drop, QR generation) and platform admin (multi-restaurant oversight, analytics, user management).
- 130+ automated tests covering all endpoints, roles, and edge cases.

MonoPay – Digital Wallet Mobile App | GitHub — 2026

Stack: React Native, Firebase

- Owned the full transaction layer end-to-end within a team project.
- Built wallet-to-wallet transfers with real-time balance synchronization through Firebase (Realtime Database).
- Implemented multi-currency support (NIS, JOD, USD) and QR code-based payments for mobile-first transfer.

Technician Hiring Platform – Full-Stack Web Project | GitHub — 2025

Tech Stack: Laravel, Angular, MySQL, Sanctum, RESTful APIs, RBAC, Bootstrap, Email Services.

- Owned the authentication and authorization architecture **–** designed and implemented a secure system using Laravel Sanctum with personal access tokens and fine-grained role-based access control (RBAC).
- Built and architected the relational database schema, ensuring normalization, indexing, and scalability.
- Built RESTful APIs for auth flows with bcrypt encryption and token lifecycle management.

EDUCATION

B.Sc. in Computer Science Program, Software Engineering Track. — **Expected Graduation: June 2027**

An-Najah National University - Nablus, Palestine

- **GPA: 3.95 / 4.00 – Ranked 2nd in Software Engineering track (All cohorts)**
- **Relevant Coursework:** Data Structures, Database, SW Development, Full-Stack Development, Data analysis.

General Secondary Certificate (Tawjihi – Scientific Stream), 97.3%

SKILLS

Programming Languages: C++ (advanced), JavaScript/TypeScript, Python, Java.
Databases: MySQL, Firebase Firestore.
Frameworks & Libraries: Laravel, Angular, React, React Native.
Tools & Technologies: Git/GitHub, AI-Augmented Workflow, Docker (familiar).
