

Hamza Zarour

Software Engineer

Palestine, Nablus | hamzazor14@gmail.com | +970569052005 | [LinkedIn: hamza-zarour](#) | [GitHub: Hamza-Zarour](#)

PROFESSIONAL SUMMARY

Backend-focused full-stack developer with hands-on experience building production-grade web applications, including a solo-built multi-tenant SaaS platform in active development. Strong focus on clean architecture, API design, security, and end-to-end ownership across the full development lifecycle.

PROJECTS (Selected)

QR Menu SaaS – Multi-Tenant Restaurant Menu Platform | GitHub

2025 – Present

Tech Stack: Laravel 12, React 19, TypeScript, Tailwind CSS v4, MySQL, Sanctum, Framer Motion

- Architected a production-ready multi-tenant SaaS platform entirely solo, serving multiple restaurants from a single codebase with strict per-tenant data isolation.
- Built a versioned REST API (/v1) with token-based auth, rate limiting, and a 3-tier role system (platform owner / restaurant owner / staff).
- Delivered two full admin dashboards: restaurant owner panel (bilingual CMS, image pipeline, drag-and-drop, QR generation) and platform admin (multi-restaurant oversight, analytics, user management).
- 130+ automated tests covering all endpoints, roles, and edge cases.

MonoPay – Digital Wallet Mobile App | GitHub

2026

Tech Stack: React Native, Firebase

- Owned the full transaction layer end-to-end within a team project.
- Built wallet-to-wallet transfers with real-time balance synchronization through Firebase (Realtime Database).
- Implemented multi-currency support (NIS, JOD, USD) and QR code-based payments for mobile-first transfer.

Technician Hiring Platform – Full-Stack Web Project | GitHub

2025

Tech Stack: Laravel, Angular, MySQL, Sanctum, RESTful APIs, RBAC, Bootstrap, Email Services.

- Owned the authentication and authorization architecture – designed and implemented a secure system using Laravel Sanctum with personal access tokens and fine-grained role-based access control (RBAC).
- Built and architected the relational database schema, ensuring normalization, indexing, and scalability.
- Built RESTful APIs for auth flows with bcrypt encryption and token lifecycle management.

EXPERIENCE

Freelance Web Developer | [Fun Memories](#) | [Nona Chocolate](#)

2025 – 2026

- Independently delivered two small-scale commercial web projects for real-world clients. Full lifecycle ownership from requirements gathering and scoping through iterative delivery, client feedback cycles, and final handoff.

EDUCATION

B.Sc. in Computer Science Program, Software Engineering Track.

Expected Graduation: June 2027

An-Najah National University - Nablus, Palestine

- **GPA: 3.95 / 4.00 – Ranked 2nd in Software Engineering track (All cohorts)**

- **Relevant Coursework:** Data Structures, Database, SW Development, Web1&2, Mobile Development, QA.

General Secondary Certificate (Tawjihi – Scientific Stream), 97.3%

SKILLS

Programming Languages: C++, Java, JavaScript/TypeScript, Python.

Databases: MySQL, Firebase.

Frameworks & Libraries: Laravel, Angular, React, React Native.

Tools & Technologies: Git/GitHub, JUnit, Playwright, QA & Unit Testing, Docker (familiar).
